Contributions

Malik: Did color features, set up cross validation / modelling code for testing features and handled LaTeX code along with writing about color features, modelling and a few other things in the report.

Victor: Did hair features, hair removal, wrote about the hair removal process, wrote much of the discussion, including most of the limitations, and helped Nikolaj with much of the results and conclusion.

Peter: Wrote the introduction, wrote about asymmetry, also did asymmetry feature extraction alongside Wilcoxon Test. Trained asymmetry features in the model and when finalised exported to Malik. Wrote and redrafted elements of the report both results and discussion.

Simon: Did border feature extractions, helped alongside the team with validating our results and the model. Also did validation on border features, to see how they performed on their own. Wrote about border, discussion, results and modelling in the report alongside the team. Helped with setting up the structures up on github.

Nikolaj: Did Haralick features, cleaned the data, wrote in the discussion, wrote about Haralick features, wrote in the conclusion, wrote about differences in the model results and wrote about how we cleaned the data.
